

John Doe, Senior Data Scientist

4567 Main Street, Buffalo, New York 98052 | (716) 555-0100 | j.doe123@live.com | www.linkedin.com/in/j.doe

Career Summary

Result-driven Machine Learning Data Scientist with 5+ years of experience designing, deploying, and optimizing ML models across finance, e-commerce, and security domains. Skilled in transforming messy real-world data into actionable insights. Passionate about building scalable solutions using AI.

Technical Skills

Programming Languages/Tools: Python, SQL, Git, Jupyter, Bash, Pandas, NumPy, PySpark, Airflow

Data Science & ML Frameworks: Scikit-learn, XGBoost, TensorFlow, Keras, MLflow, OpenCV, LangChain

Cloud Computing: AWS (S3, SageMaker, Lambda), Azure ML, GCP BigQuery

Experience

Senior Data Scientist - Tshark, CA

Jul 2021 – Present

- Developed a churn prediction model using LightGBM package in Python, resulting in the reduction of churn rate by 20% in last 6 months.
- Built an automated anomaly detection pipeline in PySpark for access logs (1B+ records), reducing triage time by 45%.
- Collaborating with product managers and engineering to productionize ML solutions in Azure ML, improving deployment cycle by 25%, meeting the service level agreement of 99.99% availability.
- Owning the end-to-end lifecycle of the data science projects as a team lead, mentoring and guiding the junior data scientists for their active contribution.

Machine Learning Engineer - Stripe, CA

Jan 2019 - Jun 2021

- Built a real-time fraud detection model using decision trees and ensemble methods, reducing chargeback rates by 18%.
- Implemented feature store for transaction-based signals, improving experiment velocity by 11%
- Led model monitoring efforts with MLflow, introducing drift detection and retraining triggers.
- Created data transformation pipeline in Apache Airflow to orchestrate and schedule the jobs for batch preprocessing, improving the feature engineering process for training ML models.

Education

- M.S. in Data Science, University of California, San Diego | 2016 – 2018
 - Relevant Courses: Big Data, Machine Learning, Statistical Modeling
- B.E. in Computer Engineering, Tribhuvan University, Nepal | 2012 - 2016

Projects

ML Risk Profiler for Security - <https://yourportfolio.com/ml-risk-profiler> : Built a multi-label classifier using embeddings + LightGBM for categorizing exception risk types.

Sales Forecasting Dashboard - <https://yourportfolio.com/sales-forecasting> : Integrated LSTM model with Flask dashboard to predict weekly sales across regions. Resulted in 20% improved accuracy vs baseline.
