

# Juan Carin

DATA SCIENTIST

✉ juanjoose.carin@gmail.com

☎ 650-336-4590

📍 Mountain View, CA 94041

## SUMMARY

Passionate about data analysis and experiments, mainly focused on user behavior, experience, and engagement, with a solid background in data science and statistics, and extensive experience using data insights to drive business growth.

## EXPERIENCE

**Data Scientist** *CONENTO Jan. 2016 - Mar. 2016*

- Designed and implemented the ETL pipeline for a predictive model of traffic on the main roads in eastern Spain. Automated scripts in R to extract, transform, clean, and load into MySQL data from multiple data sources.

**Data Scientist** *CONENTO Jun. 2014 - Sep. 2014*

- Designed an experiment for Google Spain to measure the impact of YouTube ads on the sales of a car manufacturer's dealer network.

**Head of Sales, Spain & Portugal – Test & Measurement dept.** *YOKOGAWA Feb. 2009 - Aug. 2013*

- Applied analysis of sales and market trends to decide the direction of the department. Led a team of 7 people. Increased revenue by 6.3%, gross profit by 4.2%, and operating income by 146%.

**Sales Engineer – Test & Measurement dept.** *YOKOGAWA Apr. 2008 - Jan. 2009*

- Promoted to head of sales after 5 months leading the sales team.

**Sales & Application Engineer** *AYSCOM Sep. 2004 - Mar. 2008*

- Exceeded sales target every year from 2005 to 2007.

## PROJECTS

### SmartCam

*Python, OpenCV, TensorFlow, AWS (EC2, S3, DynamoDB)*

A scalable cloud-based video monitoring system that features motion detection, face counting, and image recognition.

[juanjocarín.github.io](https://juanjocarín.github.io)

### Implementation of the Shortest Path and PageRank algorithms with the Wikipedia graph dataset

*Machine Learning at Scale, Hadoop, MrJob, Python, AWS EC2, AWS S3*

Using a graph dataset of almost half a million nodes.

[juanjocarín.github.io](https://juanjocarín.github.io)

### Forest cover type prediction

*Python, Scikit-Learn, Matplotlib*

A Kaggle competition: predictions of the predominant kind of tree cover, from strictly cartographic variables such as elevation and soil type, using random forests, SVMs,

## SKILLS

- R
- Python
- SQL
- Hadoop
- Hive
- MrJob
- Tableau
- Git
- AWS
- SPSS
- SAS
- Matlab
- Spark
- Storm
- Bash
- EViews
- Demetra+
- D3.js
- Gephi
- Neo4j
- QGIS

## EDUCATION

### Master

University of California, Berkeley  
2016

Information and Data Science

### M.S.

Universidad Politécnica de Madrid  
2014

Statistical and Computational  
Information Processing

### M.S.

Universidad Politécnica de Madrid  
2005

Telecommunication Engineering

kNNs, Naive Bayes, Gradient Descent, GMMs, ...

[juanjocarin.github.io](http://juanjocarin.github.io)

- **Redefining the job search process**

*Hadoop HDFS, Hive, Spark, Python, AWS EC2, Tableau*

A pipeline that combines data from Indeed API and the U.S. Census Bureau to select the best locations for data scientists based on the number of job postings, housing cost, etc.

[juanjocarin.github.io](http://juanjocarin.github.io)

- **A fresh perspective on Citi Bike**

*Tableau, SQLite*

An interactive website to visualize NYC Citi Bike bicycle sharing service.

[juanjocarin.github.io](http://juanjocarin.github.io)

- **Investigating the effect of competition on the ability to solve arithmetic problems**

*R*

A randomized controlled trial in which 300+ participants were assigned to a control group or one of two test groups to evaluate the effect of competition.

[juanjocarin.github.io](http://juanjocarin.github.io)

- **Prediction of customer churn for a mobile network carrier**

*SAS*

Predictions from a sample of 45,000+ customers, using tree decisions, logistic regression, and neural networks.
